

ADMINISTRATOR GUIDE

Amplify Training & Development

For the Admin & Training Team

The complete guide to running the platform — content, people, in-class training, analytics, and account management, all in one place.

Restricted access · Full company-wide visibility · Keep this guide and the admin login within the training team

Contents

Everything in the Admin dashboard, tab by tab.

Approvals & bulk enrollment	8
Managing users	9
Analytics & question-level insights	10
Reports & Analysis (AI)	11
Celebrations & Files	12
View As & Activity Log	13
Security & account notes	14

Logging in as Admin

Admin uses a single shared login — keep the credentials within the training team only.

Access

Choose the **Admin** tab at the top of the app and sign in with the training team credentials. You'll stay logged in until you log out, or after 20 minutes of no activity — same as every role.

The Admin Overview — every tab lives in the bar at the top; scroll it sideways on smaller screens.

Tip: add the app to your phone's Home Screen (tap the phone icon next to the role switcher for instructions) so admin tasks — approvals, escalations — are always one tap away.

Uploading training material

Any file type uploads directly — no conversion, nothing extra required.

■ Quick upload

- 1 Go to **Content & Quizzes** and select a file — PDF, PowerPoint, Word, Excel, or an image.
- 2 It uploads immediately and becomes a new module, titled from the filename.
- 3 The quiz builder opens right after — generate one with AI, or write it yourself.

■ New module (manual)

Tap "**New training module**" to set a title, description, points (100 by default), whether it's mandatory, and attach files — same file types as Quick Upload.

■ Adding a file later

Every module card has an "**Add file**" option — attach material to a module anytime, not just when you create it.

AI quiz generation & managing modules

■ Generating a quiz with AI

Inside the quiz builder, paste key content (or leave it blank to use the module's title and description) and tap "**Generate 20 questions with AI**". Review, edit, or add questions manually before saving.

■ Archive vs. permanently delete

ACTION	WHAT HAPPENS
Archive	Hides the module from the library and new assignments — everyone's existing progress and quiz history stays intact. Reversible anytime.
Delete permanently	Removes the module, its quiz, its files, and everyone's history for it. Cannot be undone.

Use Archive by default. Only permanently delete a module that was created in error and never really used — deleting one people have completed erases their record for it.

Company-wide bulk assignment

Assign a module to any number of people at once, across any department.

- 1 Go to **Assign Training**. Filter by department and search by name to narrow the list.
- 2 Check individuals, or tap **"Select all shown"** to grab everyone currently filtered.
- 3 Pick the module, set the passing score, and an optional due date.
- 4 Tap Assign — you'll see how many succeeded, and why any failed (e.g. already assigned).

This is separate from a manager's own Assign Training tab — theirs is limited to their team; yours covers everyone.

Running the calendar

■ Creating a class

Tap "**New in-class training**" (or the + on any calendar day) and set the name, date, and optionally a **trainer** and a **slot limit**. Managers are blocked from enrolling past the slot limit once it's full — you are not, so you can make exceptions when needed.

■ Running the session

Log hours per day, toggle whether an in-class quiz is given, and enter each attendee's score directly. Edit the trainer or slot count anytime from the class detail view.

■ Manager requests & deleting a class

Approve or decline training requests submitted by managers — approving adds it to the calendar automatically. If a class is delayed or cancelled, "**Delete this class**" removes it and notifies everyone enrolled.

Approvals & bulk enrollment

■ Approving sign-ups

Each pending request shows their chosen role and department. Confirm or change the role and assigned manager, then **Approve** or **Reject**.

■ Bulk enrollment via Excel/CSV

Upload a spreadsheet with columns for First Name, Last Name, Email, Department, and Manager — everyone is added directly, no individual approval needed since you're providing the list yourself. Temporary passwords are generated and shown for you to share.

Managing users

One searchable list of everyone registered — managers and trainees together.

ACTION	WHAT IT DOES
Search	Filter instantly by name or email
Reassign manager	Change a trainee's manager directly in the table
Reset password	Generates a new password and emails it — falls back to the credentials panel in Approvals if email isn't set up
Delete	Removes the account and all their training records — confirm carefully

Question-level insights

Quiz question analysis

Pick any module with a quiz to see every question ranked by miss rate, worst first — with exact counts ("6 of 10 attempts got this wrong"). Use it to spot content that needs rewriting, not just people who need coaching.

Full assignment table

Filter by department, see progress, time spent, due dates, and scores for every assignment company-wide. Export the whole table to CSV anytime, or remove an assignment directly from the row.

AI-powered report analysis

Ask a plain question about any file — no manual data entry.

- 1 Upload a PDF, Word doc, Excel/CSV file, or image — each is read automatically, nothing to paste.
- 2 Type your question — e.g. *"Which department has the lowest quiz completion rate and why?"*
- 3 Tap **Analyze with AI** — the answer, question, and original file are saved together for later reference.

Celebrations & Files

Celebrations

Post a top performer, an achievement, an event, or a team win — it appears instantly on every manager's and trainee's Achievements or Team tab, company-wide.

Files

Every uploaded file — training material and report attachments — is listed in one place. Deleting requires re-entering the admin password as a safety check.

View As & Activity Log

View As

Pick any manager or trainee to see exactly what their screen looks like — their real, live data, not a summary. Useful for support requests or checking what someone's actually seeing.

Activity Log

Every meaningful action — logins, approvals, quiz completions, escalations, deletions — is logged automatically with who, what, and when. Pull any date range and export to CSV for an audit.

Security & account notes

■ Sessions

Every role — including Admin — is logged out automatically after 20 minutes of inactivity, and stays logged in otherwise until manual logout.

■ Escalations

Auto-triggered after 3 failed quiz attempts, and shown on your Overview until you mark them **resolved** once you've followed up.

Keep admin credentials within the training team. Anyone with this login has full company-wide visibility and control — including the ability to delete users and permanently remove training modules.
